

Arbortext® IsoCompose®

Create Electronic Catalogs with a Simple Click of a Button

With Arbortext IsoCompose, companies of all sizes and industries can easily design, distribute, and maintain high-quality spare parts catalogs using a friendly, yet powerful user interface. Now, the efficiency and ease of online electronic catalogs is available and affordable for all organizations.

The need for illustrated and interactive spare parts catalogs continues to grow. In the past, this relatively new approach for distributing information was primarily the domain of very large enterprises. Arbortext IsoCompose makes it easy and cost-effective for any organization—large and small—to tap into the power of electronic information delivery.

Arbortext IsoCompose is a complete application for catalog creation. It speeds the work of documentation professionals in every phase of catalog production, from design to distribution, as well as subsequent revisions. This wizard-based application makes it easy to quickly create high-quality electronic catalogs without any programming required.

Key Benefits

A Complete Solution

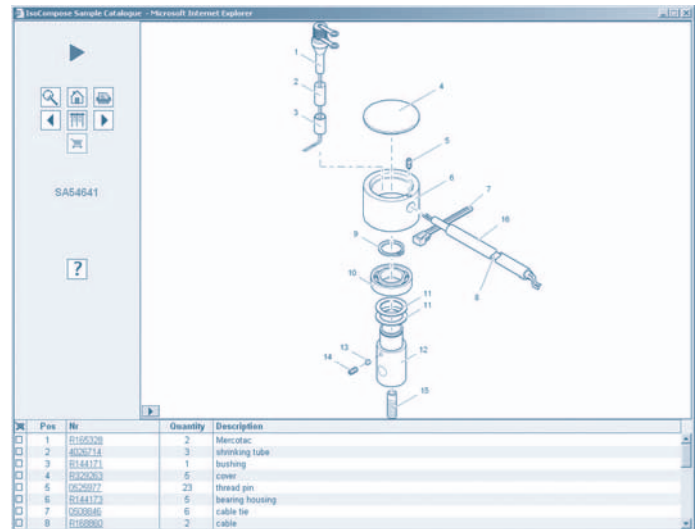

- Includes all the necessary capabilities—no further adaptation needed
- Catalogs can be distributed via CD and Internet

Easy To Use

- Illustrators and editors are up-and-running immediately—with no special catalog expertise required
- The wizard-based user interface makes it easy to quickly create high-quality illustrated and interactive spare parts catalogs without any programming

Lowers Cost of Creating and Maintaining Electronic Catalogs

- Create high quality spare parts catalogs in just a few simple steps
- Automatically recreate illustrated spare parts as information (text or illustrations) is revised
- Support multiple languages in a single solution

The intuitive user interface of Arbortext IsoCompose makes it accessible for organizations of all sizes.

Arbortext IsoCompose enables companies to quickly create high-quality electronic catalogs.

Features

- See a hierarchical view of groups and subgroups of components in the table of contents
- Automatically create catalog structure from a tab-delimited text file and a list of images and illustrations
- Support multiple languages in a single catalog
- Support CGM file format produced with Arbortext® IsoDraw® or other applications
- Display interactive part illustrations
- Match catalog text to part numbers
- Support vector graphics
- Interactively navigate the catalog in multiple ways: through a structured table of contents, online search, hyperlinks, and hotspots
- Automatically generate common catalog elements and capabilities, including homepage, table of contents, catalog pages, shopping basket, print functions, catalog search, and online help
